Jordan

## **ABSTRACT**

Information and Communication Technology (ICT) has virtually influenced all facets of human existence. Several restructuring plans have been put in place to introduce ICT across the various levels of education. Jordan with one of the most robust and advanced ICT in Southwest Asia, strengthened by 15 years of policies that favour the industry, has invested heavily to incorporate the technological innovations into schools in Jordan. The aim of this research article is to explore the roles of ICT in education in Jordan from the point of view of the school directors in Jersh; and explore some of its limitations. ICT is applicable in all levels of education. ICT as a modern technology that simplifies and facilitates human activities is not only advantageous in many respects, but also has its limitations. These limitations could teacher-related, student-related or even technologically related.
